Abstract
This research is entitled “The Analysis of Locution, Illocution, and Perlocution Speech Acts in Mata Najwa Trans 7”. The purpose of this study was to analyze the forms of speech acts of locution, illocution, and perlocution found in the Mata Najwa event in Trans 7. This study used the speech act theory proposed by Searle. At the data collection stage, the documentation method was used. The stages of data analysis used the contextual method—the stage of presenting the results of data analysis used formal and informal methods. In the Mata Najwa event, three types of speech acts were found: locution, illocution, and perlocution. Two data are locution speech acts, two data are illocutionary, and two data are perlocution.

Keywords: Locution, Illocution, Perlocution, Mata Najwa, Speech Act

INTRODUCTION
Humans are individual creatures and social creatures. Concerning social beings, humans cannot be separated from other people, and their life is always with other people. To keep human life, communication is needed. Communication is a social process that is very basic and vital in human life (Purwanto, 2018). Communication is also defined as a process in which individuals, groups, organizations, and communities create and use communication media in the form of information to connect. Humans need language as a tool to communicate. A language is a tool used to provide information between communicants (Rabiah, 2018). Language is a means of social interaction or human communication. In all forms of communication, humans send information directly through their thinking, opinions, aspirations, sentiments, and feelings (Simamora et al., 2020).

Chaer and Agustina (1995) divide the types of communication into two types: nonverbal communication and verbal communication. Nonverbal communication is communication that uses tools such as whistles, lights (lights, flames), flag signals, while verbal communication or language communication is communication that uses language as a tool. The language used in this communication must, of course, be in the form of a code that is both understood by the speaker and the speaker or listener’s opponent, namely writing and speaking. Furthermore, the speaker and the interlocutor, in this case, use the terms speaker and interlocutor (Adhiguna et al., 2019). According to experience, language always appears in the form of individual actions or speech acts. Therefore, every study of language structure must start from the study of speech acts. Speech acts are a concrete manifestation of language functions, which are the basis for pragmatic analysis (Rahardi, 2005).

In every communication process, there will be a speech act in a speech situation. Speech acts are linguistic interactions in the form of speech or more that involve two parties, namely the
speaker and the interlocutor, based on a particular context or situation (Chaer, 2010). The context or situation of speech significantly affects a speech act. This is because the speaker and the interlocutor are at a certain point of speech, time, place, and situation. The speaker and the interlocutor can understand well the intended meaning of the speech the two parties want. The speaker's language ability in dealing with a speech situation dramatically influences the meaning or meaning of actions in his/her speech.

A speech act is an individual symptom that is psychological, and its continuity is determined by the speaker’s language ability in dealing with specific situations (Simamora et al., 2020). It is more visible in the significance of the speech act or its purpose in the utterance. The line “It is so hot in here!” may take on various connotations depending on the context. It is possible that the person speaking is merely reporting that the air conditioner is on at the moment, requesting that anyone else open the door or switch on the air conditioner or even make a criticism. Thus, sociolinguistic talents, along with an awareness of speech acts, are crucial for interaction, as individuals will constantly be needed to understand and execute a number of distinct speech actions (Sapungan et al., 2018).

The speech act is one of the most useful, observable, practicable, concrete, and empirical language skills (Siritman, B., & Meilantina, 2020). In everyday life, humans must carry out speech events to both speaker and interlocutor getting information. Speech acts in speech events are a communication process in which humans must carry out speech events to both speaker and interlocutor. A speaker can manifest three types of actions: the locution act, the illocutionary act, and the perlocution act (Searle, 1969). Locution acts are speech acts that are spoken to express something (Tri, 2018). The act of elocutionary speaking is approximately equal to reciting a specific utterance (Hidayat, 2016). An illocutionary act is an action used to do something for a specific purpose and function (Rachmawati et al., 2017). The effect that the speaker's expression has on the speech partner is referred to as perlocutionary action (Pratiwi et al., 2021).

Various media are used as a means of conveying information both in writing and speaking. One of the media that has an essential role in language development is electronic media, which helps send or deliver information (Veronica & Gupita, 2020). As a part of electronic media, television has a big part in conveying information in speeches. This is because electronic media is a medium that is widely consumed by the public. The application of speech act forms as described above can be seen in several television programs, one of which is the Mata Najwa talk show on Trans 7. Mata Najwa is a speech degree program hosted by senior journalist, Najwa Shihab. Mata Najwa consistently presented interesting topics with first-class speakers. A number of special guests attended and spoke in M Najwa, including Bacharuddin Jusuf Habibie, Megawati Soekarnoputri, Jusuf Kalla, Dahlan Iskan, and Joko Widodo.

Based on the elaboration above, the researchers are interested in researching speech acts used in the Mata Najwa program on Trans 7 entitled “The Analysis of Locution, Illocution, and Perlocution Speech Acts in Mata Najwa Trans 7”. The purpose of this research is to analyze the locution, illocution, and perlocution used in Mata Najwa program.

Speech Acts

The speech act is a pragmatic element that involves the speaker, listener, or reader and what is being discussed. In its application, speech acts are used by several disciplines. According to Febriana and Fajarah (2018), individual speaking acts have cognitive and emotional consequences dictated by the speaker’s language skill to deal with various conditions. It is more
visible in the content of the speech act than in the speech act itself (Marbun & Handayani, 2020).

Austin (1962) states that when someone says something, he also does something. This statement then give the basis for the speech act theory. Yule (1996) defines speech acts as actions performed through speech. Meanwhile, Mackay (1996) defines speech acts as a functional unit in communication. So it can be concluded that speech acts are utterances that contain action as a functional unit in communication that considers aspects of the speech situation.

**Locution**

Locution speech acts are speech acts to express something. This speech act is often referred to as *The Act of Saying Something*. In this speech act, a series of language sounds are produced, meaning something (Ibrahim, 1993). Furthermore, speech acts are relatively the easiest to identify because their identification tends to be done without including the context of the speech (Wiyana et al., 2011).

**Illocution**

Illocutionary acts are speech acts that contain intent and speech power. Illocutionary acts are not easily identified because illocutionary acts are related to who is speaking to whom, when and where the speech acts are performed, etc. This illocutionary act is an essential part of understanding speech acts (Wiyana et al., 2011). The act of illocution is called *The Act Of Doing Something*.

**Perlocution**

The act of perlocution is known as *The Act of Affecting Someone*. The speech uttered by a speaker often has an effect or power of influence (perlocutionary force) for those who listen to it. This effect or power of influence can occur because the speaker intentionally or unintentionally creates it. Speech acts whose utterances are intended to influence the interlocutor are called perlocution acts (Wiyana et al., 2011).

Rustono (1999) also states that perlocution speech acts are speech acts whose utterance is intended to influence speech partners. Meanwhile, Tarigan (1987) states that utterances uttered by speakers are not only word events that occur by themselves but are utterances uttered to contain specific aims and objectives designed to produce effects or consequences on the environment of speech partners or listeners.

Based on the description above, the researchers are attracted to investigate figurative language analysis entitled “The Analysis of Locution, Illocution, and Perlocution Speech Acts in Mata Najwa Trans 7.” The purpose of this research is to discover locution, illocution, and perlocution in Mata Najwa Trans 7 program.

Several previous studies related to this research. First, research entitled “Illocutionary and Perlocutionary Acts in the Novel “the Book of Lost Things”” (Setiawan, F. Djajanegara, 2020). The article aimed to discuss how the novel’s characters use Illocutionary and Perlocutionary activities. The study’s findings reveal that the characters in The Book of Lost Things engaged in various illocutionary acts while also referring to Perlocutionary activities. It can be determined that this book makes use of Illocutionary and Perlocutionary activities. Second, a research conducted by Putri et al. (2019). This research aimed to examine the speech act utilized
in the film Harry Potter and the Goblet of Fire. This descriptive qualitative study utilized the utterances from the Harry Potter and the Goblet of Fire film as data. The researchers revealed that statements in films contain illocutionary, illocutionary, and perlocutionary behaviors.

This study tries to continue the study of locution, illocution, and perlocution. The researchers conducted this study using the Mata Najwa show as a sample because this program was top-rated and viral as this research was being conducted. This research is helpful for other relevant researchers or anyone interested or students looking for references for their research.

METHOD
The method used in this research was descriptive qualitative (Moleong, 2010). Moleong states that qualitative descriptive research uses data collected in words, pictures, and not numbers. The data source used in this research is the recording of Mata Najwa's speech title show in the episode Menanti Terawan on September 28, 2020. The data collection technique in this study was a documentation technique. The steps taken were: watching the program as a whole, listening to and recording the utterances, which are categorized into speech acts of locution, illocution, and perlocution. The form of data is in the form of dialogue text that is involved in the conversation.

Meanwhile, the data validity checking technique in this study was persistence. The persistence referred to in this study is making observations more carefully and continuously (Sugiyono, 2012). The data found were rechecked to ensure whether the data were correct or incorrect. The data analysis method in this research was an interactive descriptive model. The steps were as follows: Data collection was carried out while watching the object of research. The data obtained were grouped or classified into specific sections. The final step was to verify and draw conclusions on the data.

RESULTS AND DISCUSSION
Results
Locution
Locution speech acts can be found in the following data:
Data 1:

“Pandemi belum reda dan terkendali”

Discussion: The form of speech in data 1 is a form of locution speech act because the speech is only a speech that states something, not to do or influence the other person. This speech was narrated by Shihab when he wanted to invite the Minister of Health.

Data 2:

“Sampai sekarang kondisi pandemi belum juga terkendali data dan angka jelas menunjukkan itu, bahkan sudah berangsur-angsur di saat negara-negara lain bisa memperlonggar situasi.”
Discussion: The form of speech in data 1 is a form of locution speech act because the speech is only a speech that states something, not to do or influence the other person. This speech is narrated by Shihab when she was about to ask the presence of the minister of health is during this pandemic.

Illocation
Data 3:

“Yang jelas bukan hanya desakan ke Presiden, tapi publik di antaranya lewat petisi meminta kebesaran hati Anda untuk mundur saja”

Discussion: The form of speech in data 3 is a form of illocution speech act because it was accompanied by a specific purpose between the speaker and the speaker. This speech was narrated by Shihab when he wanted to ask whether the Minister of Health was willing or not to resign from his job.

Data 4:

“Kami tahu takkan ada yang bisa menyelesaikan persoalan pandemi ini sendirian, tapi kami berharap Anda setidaknya bersedia untuk memberi gambaran”

Discussion: The form of speech in data 4 is a form of illocution speech act because it was accompanied by a specific purpose between the speaker and the speaker. This speech was narrated by Shihab when she wanted an answer from the Minister of Health on how he handled the pandemic.

Perlocution
Data 5:

Discussion: The form of speech in data 5 is a form of perlocution speech act because this speech requires an attitude or a person's reaction to a sentence or statement. This speech was asked by Shihab when she doubts the role of the Health Ministry during this pandemic.

Data 6:

“Menteri Kesehatan Terawan Agus Putranto, waktu dan tempat dipersilakan.”
Discussion: The form of speech in data 6 is a form of perlocution speech act because this speech requires an attitude or a person's reaction to a sentence or statement. This speech was asked by Shihab when she wanted the presence of the Health Ministry to have a conversation with her.

CONCLUSION

Based on the results of this research, the following is a conclusion regarding the previous discussion. In the Mata Najwa program, Mata Najwa Menanti Terawan episode, speech acts of locution, illocution, and perlocution were found. The analysis results found that 2 data were included in the location, 2 data were included in the illocution, and two were included in perlocution.

ACKNOWLEDGMENTS

The researchers would like to thank their family and their friends for completing this research.
